DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Base plate for at least one carbon brush having a removable cover which assists in disengaging/engaging the carbon brush.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 18 and 20-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prell et al in view of Lindner and Redick.

Prell et al discloses a carbon brush 34 having a brush guide 24 a spring element 54 urging the carbon brush 34 in a direction towards a commutator (see figure 1).

However, Prell et al does not disclose having a movable retaining element wherein the brush may be released or engaged.

On the other hand, Lindner discloses for the purpose of improving the life expectancy of brushes, a retaining element 4 which in one position retains the brush and in another position releases the brush (see figure 3).

However, neither Prell et al nor Lidner disclose having a pin in perpendicular direction to the longitudinal axis of the carbon brush.

On the other hand, Redick discloses for the purpose of improving the manufacturing process of dynamoelectric machines, a pin 108 on a side of the brush that upon retraction of the pin the brushes become engaged (see figure 2).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to design a brush holder as disclosed by Prell et al and to modify the invention by using a retaining element for the purpose of improving the life expectancy of brushes as disclosed by Lindner and to use a pin for the purpose of improving the manufacturing process of dynamoelectric machines as disclosed by Redick.

Allowable Subject Matter

3. Claims 28, 30 and 31 are allowed.
4. Claims 19 and 24-27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments with respect to claims 18-28, 30 and 31 have been considered but are moot in view of the new ground(s) of rejection.
